<b>Wednesday,</b> <b>02-05-2018</b> Morning	Travel Kelwan to Alamata--chifra	Ready travel to back to the work place.		See above			
Afternoon		come back to Chifra at afternoon		See above			

<b>Reporting Expert:</b> <b>Ahmed Amin</b>	<b>Summary of Results of mission</b>  I was spent three days from Chifra to Mohoni to kelwan for have been brought elephant grasses & we had planned 30,000 elephant cutters to plant at Kelwan but, 11,000 cutters are brought.  Firstly, we had brought more than 3000 whole cutters is stem plus cluster roots that compilation are loaded & we agreed with saler/supplier (kifle) to separate single cutter to two part then we counted being 6000 cutters. The elephant grass was planted by 1mx50cm apart at the lower alongside of weir of Tabia dora (GU1W-030) and we were planted estimate at about 5958, 42 cutters & 55 Doshe grasses are planted at Gulina nursery at the first day.						
---	---	--	--	--	--	--	--

	<p>Secondly, the 2<sup>nd</sup> day we back to the Mohoni with supplier to beginning by counting 5000 cutters we loaded &amp; then we couldn't get 30,000 cutters b/c the supplier don't have sufficient elephant grasses material &amp; took from supplier farm with sample of other kind of grasses like Doshe &amp; guatamala grasses. The remaining elephant grasses cutters are propagated the side of cascade of upper of WSW.</p> <p>Finally, after we finished the plantation activities the next day we discussed with the community 10 people (8 men and 2 women) of the CBO participated in the group discussion (out of 60 members), together with 3 PADO officials. The CBO members agreed to protect the planted area. First, they said that they will fence it. When asked with which branches they will fence it, they said that they will guard planted area without fencing, as they do not want to cut the trees around the weir sites. The CBO members asked for fruit trees (Mango, Orange) and support for vegetable production.</p> <p>We come to Chifra nursery, we are planted <b>134</b> elephant grass cutters &amp; the erosion in the nursery is slightly increasing so due to minimize the size of sheet erosion on the nursery. Since we are planting from <b>134</b> cutters around 98 seem to healthy but rest of 36 that probably have not good stand or vigorous for sprout. On the Thursday, we were started planted totally. Therefore, I was prepared the land of the site already but, we have to get elephant grasses planting materials from others area have to quickly plant in the May before start the Ramadan &amp; the nursery should covered by E. grasses in mid-May.</p>
