4.3

4.3.1. □ □ □ □ □

The figure consists of two horizontal bars. The first bar, representing 90%, is filled with approximately 90 small squares. The second bar, representing 98%, is filled with approximately 98 small squares. The bars are set against a background of a grid of small squares.

4.3.2.

A horizontal row of approximately 30 small, identical rectangular icons. Each icon is light gray with a thin black border and contains a dark gray geometric shape in the center. The icons are evenly spaced and extend across the width of the page.

Figure 12 shows a field of rice plants that have suffered from shattering. The plants are leaning over and breaking at the top, causing the grains to fall to the ground.

Figure 12 shows a field of rice plants that have suffered from shattering.

6. Rice Shattering Problem

6.1. Introduction

Rice shattering is a common problem in rice production. It occurs when the rice plant reaches maturity and the stem becomes too weak to support the weight of the grain. This causes the plant to break at the top, and the grains to fall to the ground. The problem is most severe in varieties like IRRI 90-150, which have long, slender grains. Shattering can result in a significant loss of yield, as up to 100% of the grains may fall to the ground. To prevent shattering, farmers can use shorter-grained varieties or apply fertilizers to strengthen the stem.
